

IN THE SPECIFICATION AMEND

Please replace the paragraph beginning at page 12, line 6 with the following rewritten paragraph:

- Prior to positioning of the apparatus, the proper compensating members 29 are selected and attached to the lower perimeter of the apparatus. Specifically, the measurements taken at the beginning will determine which compensating members (30, 30', 32, 32') are attached to the cavity so that the bottom surface of the bottom rail (which includes the seal) will be positioned in the desired location on the liner to be formed. Of course, in certain embodiments, it is contemplated that no compensating members may be needed. In embodiments that include adjustable compensating members, it is contemplated that the ~~su~~ user will be able to provide the necessary adjustment--
